

THE ENGINEER’S LOGBOOK

Your single source of truth. A legal and technical document.

PROJECT TITLE The official name of what you are working on.
TOOLS USED Hardware and software. 3D printers, laser, CAD package, everything.
DAILY BULLET POINTS What you actually got done this session.
NOTES, 50+ WORDS A technical description of the work and the reasoning behind it.
NEXT CLASS AGENDA Clear, actionable steps for next time.
LABELED IMAGES Visual evidence that it progressed.

Why it matters more than you think

Thomas Edison left roughly five million pages of notes. In 1943 the Supreme Court struck down Marconi’s key radio claims because Tesla’s earlier documented work came first. The logbook is the evidence that the invention was yours.
