

BEFORE YOU TOUCH A MACHINE

Only trained AND authorized students may operate machinery or hand tools.

TRAINED

You have completed all necessary provided training.

AUTHORIZED

You have successfully passed the appropriate safety tests.

They are not the same thing

Training is the instruction. Authorization is the check that you took it in. Doing the training does not authorize you, and being confident authorizes you least of all.

- Every machine is separate. The bandsaw does not certify you on the laser.
- Access can be revoked at any time, at an instructor's discretion.
- Never work alone with power tools — two people, both able to see each other.
